

Business-Cockpit

The challenge

Certainly, your company also use classical ERP- and MRP-systems. These frequently provide a large number of standard functions which are - in day-to-day business - more obstructive than supportive; significant data or evaluations according to your demands, however, are never found. Individual lists and measurements can only be realized at considerable costs and efforts - if ever.

The solution

We deliver you a customized product: Business Cockpit, realized by **mib Heinen**, has proved to support and improve performance of administrative processes many times. According to the requirements, inventory controlling, order processing and delivery performance are visualized and made measurable. Within previous application fields, all set goals were realized and stabilized sustainably within shortest time by the Cockpit's support. The entire implementation is conducted by **mib Heinen**; the method for effective and efficient process control, which we have developed from experience, will create transparency in your company

The method

The cost to you amounts to a few days:

- Demand analysis and definition of key figures: **mib** / your Management
- Carrying out Process-Interviews: **mib** (1 day / Process)
- Interface Analysis: **mib**
- Interface Programming: **mib**
- Programmiing the work packages: **mib**
- Implementation of Pilot application: **mib**
- Adjustment and fine tuning: **mib** / your employees
- Training employees: **mib**

Your benefit

With support of your experience and knowledge, we implement an individual management information system based upon your process requirements on-site. You will receive a system cockpit which is clear and transparent and can be improved by you. Your existing systems will remain untouched and leading for the company

Take action now

The sooner these opportunities are available for you the sooner you can make right decisions on a solid base and realize them. All previous cockpit installations focused - apart from system set-up - upon simultaneous optimization of business processes. Another advantage is that expenditures for purchase of customized soft-ware can be amortized according to their economic useful life. Benefit from the triple advantage now.

Our expertise

mib Heinen unites long-standing expertise from consulting small and mid-size businesses with long-term project experience for renowned national and international groups. Our company has specialized on optimization of the business processes „production logistics“ and „client order processing“. For several years we have been helping small, mid-sized and industrial companies to gain new and additional success.
